

GUIDELINES FOR REVIEWERS

The peer-review should include:

1. The peer-review should include:

- name and surname
- teaching/scientific title
- reviewer's home institution

2. peer-reviewed manuscript information:

- author's name and surname
- title
- manuscript type
- area the manuscript covers
- manuscript volume (number of pages, chapters, picture, diagrams, charts etc.)

3. opinion on the manuscript:

- to what extent is it an original work, based on insights into the achievements of modern science and whether there are works of similar content and quality
- whether the manuscript's content corresponds to the area for which it is intended
- is there a used literature list and how current it is
- are the terminology, units of measurement, etc. compliant with existing regulations
- is manuscript presented clearly and concisely (in conceptual and linguistic terms)

4. conclusion and assessment:

- a statement as whether the manuscript fully or partially meets the requirements of the teaching-scientific literature for the specified scientific/artistic field
- a proposal for any necessary corrections and changes in the manuscript
- final assessment with a recommendation for manuscript publication or non-publication as a University of Sarajevo university edition (indicating the publication type)

5. date of writing the review and signature of the reviewer.
